Allowable Subject Matter

Claims 1 – 22 are allowed. The prior art of record fail to teach an automotive lane deviation avoidance system comprising, among other limitations, a control unit comprising a lane deviation section calculating a host's vehicle course correction value needed to avoid the host vehicle's lane deviation from the driving lane and additionally compensating for the host vehicle's course correction value or desired yawing moment based upon a throttle opening of the host vehicle.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawazoe et al. (US 6,493,619 B2) and Uenuma et al. (US 6,580,986 B1) both teach related lane deviation avoidance system but do not address this idea of at least compensating for a host vehicle's course correction value or desired yawing moment based upon a throttle opening of the host vehicle.
